Business Process Management System

Business Process Management (BPM) is a disciplined approach to identify, design, execute, document, monitor, control, and measure both automated and non-automated business processes to achieve consistent, targeted results consistent with an organisation's strategic goals.

Business Process Management is an effective methodology to use in times of crisis to make certain, that the processes are efficient and effective, as this will result in a better and more cost & process efficient organization.

At myAsset, we believe that Business Process Management should not be a onetime exercise. It should be an evolvement of continuous evaluation of the business processes to improve the total flow of processes. It is an integration of operations performed by people and software systems coupled with well regulated business rules.

Enterprise Solution

Asset Management System
Track assets that are on loan out and eventually returned, such as books, files, tools or even IT equipment

Inventory System
Track the inventory of your stocks, spare parts, stationeries, consumables and other fixed assets

Retail Management System
Customisable hardware and software that runs both the front counter and back office operations of a business
